

**STEM Online NZ offers complete resources that cover all the learning required in the following NCEA Achievement Standards...**

## Science

AS90940: Mechanics (Level 1)

AS91171: Mechanics (Level 2)

AS91173: Mechanics (Level 2)

AS91524: Mechanics (Level 3)

AS90944: Chemistry (Level 1)

AS91164: Chemistry (Level 2)

## Mathematics

AS91028: Tables, Equations and  
Graphs (Level 1)

AS91027: Algebra (Level 1)

***TO REGISTER [CLICK HERE](#)***

## Digital Technologies (Level 1):

AS91886: Human Computer Interaction. In English and Te Reo Māori

AS91887: Compression Coding. In English and Te Reo Māori

AS91885: Search and Sort Algorithms

AS91880: Media Design

## Digital Technologies (Level 2):

AS91890: Conduct an inquiry

AS91897: Advanced processes

AS91898: Computer science concept

AS91899: Present a summary

- Read more about these at the [TKI website](#).
- Register by [clicking here](#).

- The organisation of the resources is similar for each of these standards. To help you navigate the resources we will show how AS90940 Mechanics is set out.

10. Review

What are we up to in week 8?	Energy	What is Energy?
Types of Energy	Gravitational potential energy	Do it: Swinging ball of death
Kinetic energy	Work it out: Energy	
Energy transformations	Law of conservation of energy	Collaborate: Should we jump?
Work it out: Bodene bomb	Work it out: Howzat?	
Kinetic energy, mass and speed	Quiz	Let's review...

What are we up to in week 8?
 Energy
 What is Energy?

### What are we doing in part 8?

#### Learning Goals

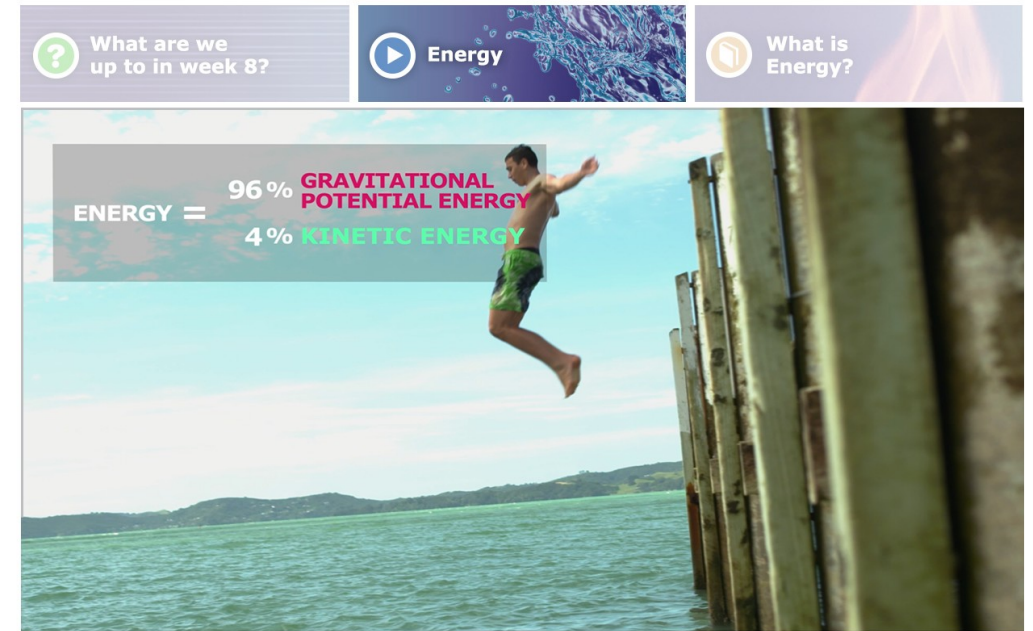

By the end of the section, you should be able to:

- Describe energy transformations
- Calculate gravitational potential energy and kinetic energy
- Calculate speed from kinetic energy
- Apply the law of conservation of energy to find unknown speeds
- Discuss the effect of friction and how it relates to conservation of energy

There is a check sheet to help you track your progress.

Click the icon to take a look:

- Each unit starts with an overview of goals and activities.

- This is followed by an introductory video of the big idea and key concepts of the unit.

[RETURN](#)

## Work it out: Bodene bomb

Let's look again at Bodene's energy as he jumps from the wharf.

What types of energy does Bodene have before he jumps and as he is about to hit the water?

Select your answers from the options below, then click submit.

The energy Bodene has before he jumps is  energy.

Just before he hits the water, this stored energy is transformed into  energy.

[SUBMIT](#)

- There are lots of practice activities that you can do in any order you like. A tick appears in each box as you complete it.

What are we up to in week 8?	Energy	What is Energy?
Types of Energy	Gravitational potential energy	Do it: Swinging ball of death
Kinetic energy	Work it out: Energy	
Energy transformations	Law of conservation of energy	Collaborate: Should we jump?
Work it out: Bodene bomb	Work it out: Howzat?	
Kinetic energy, mass and speed	Quiz	Let's review...

- Real-world experiments are supported by internet resources that reinforce the concept.

**STEM Online NZ also works with the Ministry of Education to produce learning resources for the following Digital Technologies Achievement Standards...**
