

# Farmer Fiona's Fence - Part 2

Once she knows the quantity of fence posts and chicken wire she needs, she wants to check how much it will cost her. Help her work out the costs by using answering these questions.

1. If each fence post costs \$20, how much will she need to spend to get all the fence posts she needs?
2. If the chicken wire comes in five-metre rolls, how many rolls will she need to buy to make sure she has enough?
3. How much will she need to spend on chicken wire, if each roll costs \$15
4. How much will these materials for the fence cost her altogether?

Make sure you show all of the steps you take to find the answers in your maths book.

For this part of the problem you will need to think back to some number strategies.

These might include addition and subtraction, or multiplication and division strategies.

Write a sum  
or  
number sentence.
